Summer Sale	7K
New Year Special	3K

A scatter plot illustrating the relationship between Profit (X-axis) and Net sales (Y-axis). The X-axis ranges from 0K to 20K, and the Y-axis ranges from 0.0M to 0.3M. The data points, represented by blue circles, show a strong positive linear correlation, indicating that as profit increases, net sales also increase. The points are densely packed along a diagonal line, suggesting a consistent relationship across the range of profits shown.

The chart displays the 'Sum of Net sales' on the Y-axis, ranging from 0.0M to 0.6M in increments of 0.2M. The X-axis represents the 'Date (dd/mm/yyyy)' from 2020 to 2024. The data is represented by a highly volatile blue line, showing frequent peaks and troughs. Notable peaks occur around early 2020 (reaching nearly 0.6M), late 2022 (reaching over 0.6M), and early 2024 (reaching over 0.6M). The overall trend shows significant fluctuations throughout the period, with sales frequently spiking above 0.2M and 0.4M.
